## Projects.

### 1. Portfolio :

This is a personal project. Written using HTML, CSS and JS, and is currently deployed.

[See it live in action.](#)

Skills: HTML · Cascading Style Sheets (CSS) · JavaScript.

### 2. Twitter Clone:

Project Description:

TweeterClone is a front-end project aimed at replicating the user interface and functionality of the popular social media platform, Twitter. This project serves as an opportunity to showcase my skills in front-end web development, user interface design, and interactivity.

The project is deployed and active.

Key Features:

1. Authentication and User Profiles:
2. Tweeting:
3. Responsive Design

[See it live in action.](#)

### 3. Todo-List using Redux:

This project showcases the usage of a better state management system -Redux-.

I used redux to create a central store of states and added features(slices) like adding a Todo\_Item, removing a Todo-Item and Toggling the checkbox, which would use the data directly from the central -Redux- store. This app also showcases my ability to perform CRUD on the go.

The project is deployed and active.

[See it live in action.](#)

### 4. Video-Game-API.

My first project playing with API's, This App uses [Cheap-Shark API](#) plus useSWR hook to fetch data on the go, and display the data according to search parameters filled in the input field.

This app also has a section which displays the best deals on the [Cheap-Shark Store](#).

The project is deployed and active.

[See it live in action.](#)

### 5. Quiz App

Made a simple quiz app as a starter project.

Uses validation to prevent users from skipping an input field.

Also made it fully responsive on all devices.
